

About Us

FACT2006 is a corporate company in United Kingdom since 2006. This company has been going through a development process of an innovation Baking Additive since 2007. The development has helped us to identify a commercial product as our brand to secure our business improvement. After 7 years we have realised a Baking Additive which has helped us to convince many businesses in the field, how good is our Additive to increase the quality of baking products found in today market place. Our business is driven by three ingenious men with the following skill:

Serge Cingashamwa: High diploma in Gemmology from Birmingham Jewelleries College: he is specialised in soil engineering.

John Tandy: Degree in Computer Engineering from the University of Coventry: he is specialises in finance and ICT applied in food

Alfred Musasa: Master Degree in Research WBS from the University of Middlesex University: specialised in new consumable products and services design.

Our business is involved in working with the scientific community since 2007 where we provide our input in the concept of many range of product including robotic development, processing machineries development and policies development. Our partnership with a network of professional, Academic and local Authority that has helped us innovate our knowledge and our skill.
